The Policy Authority (PA) of the PKI for the government supports the Minister of the Interior and Kingdom Relations in managing the PKI for the government.

The PKI for the government is an agreements system. This system enables generic and large-scale use of the electronic signature, and it also facilitates remote identification and confidential communication.

The tasks of the PA of PKIoverheid are:

- contributing towards the development and the maintenance of the framework of standards that underlies the PKI for the government, the Programme of Requirements (PoR);
- assisting in the process of admittance by Certification Service Providers (CSPs) to the PKI for the government and preparing the administration;
- supervising and monitoring the activities of CSPs that issue certificates under the root of the PKI for the government.

The purpose of the Policy Authority is:

Enforcement of a practicable and reliable framework of standards for PKI services that provides an established level of security for the government's communication needs that is transparent to users.

1 Introduction to the Certificate Policy

1.1 Overview

This is part 3d of the Programme of Requirements (PoR) for the PKI for the government and is known as the Certificate Policy (CP). Set out in the PoR are the standards for the PKI for the government. This section relates to the requirements laid down for the services of a Certification Service Provider (CSP) within the PKI for the government. Within the PKI for the government, a distinction is made between various domains. This document only relates to the device-linked certificates issued by CSPs in the Autonomous Devices domain.

This chapter includes a brief explanation of the CP. A more detailed explanation regarding the background and structure of the PKI for the government, as well as the cohesion between the various parts within the PoR is included in part 1 of the PoR.

For a list of the definitions and abbreviations used in this section, please refer to part 4 of the PoR.

1.1.1 Design of the Certificate Policy

As stated in part 1 of the PoR, the requirements that form part of the CP consist of requirements ¹:

- that ensue from the Dutch legal framework in relation to the electronic signature;
- that ensue from the latest version of the ETSI TS 102 042 standard
 - where policy NCP+ is applicable, so that a SUD is used (ETSI CP OID 0.4.0.2042.1.2)²;
- that are specifically drawn up by and for the PKIoverheid.

Incorporated in chapters 2 to 9 inclusive are references to the specific PKIoverheid requirements in the Additional Requirements. The table below shows the structure of the reference to the actual PKIoverheid requirement (PKIo requirement).

| | |
|-----------------|--|
| RFC 3647 | Reference to the paragraph from the RFC 3647 structure to which the PKIo requirement relates. RFC 3647 is a PKIX framework of the Internet Engineering Task Force (IETF) and is the de facto standard for the structure of Certificate Policies and Certification Practice Statements ³ . |
| Number | Unique number of the PKIo requirement. In each paragraph, consecutive numbering is used for the PKIo requirements. In combination with the RFC 3647 paragraph number, this forms a unique label for the PKIo requirement. |

¹ For an explanation regarding the positioning of the requirements applicable within the PKI for the government, please refer to part 1 of the PoR.

² The CP Autonomous Devices is based on an underlying standard different to that of the CPs for personal certificates. Because device-linked certificates are not personal and are not qualified certificates in accordance to the "Wet Elektronische Handtekeningen" (Electronic Signature Act), the requirements for device-linked certificates differ on certain points from the requirements for other types of certificates. For certificates with an ExtkeyUsage client authentication and server authentication the policies NCP in combination with OVCP, PTC and Netsec are applicable. This is due to the fact that these certificates are deemed to be SSL certificates according to the CABforum. The Netsec requirements 1h, 3a, 3e 4c.i and 4f are not normative (ETSI CP OID 0.4.0.2042.1.7).

³ Chapters 2 to 9 inclusive only include those paragraphs from RFC 3647 to which a PKIo requirement applies.

This CP also includes a number of provisions that are not formulated as PKIo requirements. These provisions do not make any demands on the CSPs within the PKI for the government, but do apply as a policy to the PKI for the government. This concerns provisions from paragraphs 1.1, 1.1.1, 1.1.2, 1.2, 1.3, 1.4, 1.5, 8, 9.12.1, 9.12.2, 9.14 and 9.17.

The profiles used within PKIoverheid relating to the device certificates and status information certificate are listed in appendix A.

Based on chapters 1 to 9 inclusive, a reference matrix is included in appendix B. In accordance with the RFC 3647 structure, the matrix contains a reference to the applicable requirements within the PKI for the government. A distinction is made between the requirements originating from Dutch law, requirements from ETSI EN 319 411-3 and the PKIo requirements.

1.1.2 Status

This is version 4.1 of part 3d of the PoR. The current version has been updated up to and including July 2015.

The PA has devoted the utmost attention and care to the data and information incorporated in this CP. Nevertheless, it is possible that there are inaccuracies and imperfections. The PA accepts no liability for damage resulting from these inaccuracies or imperfections, nor is any liability assumed for damage caused by the use or distribution of this CP, if this CP is used for purposes other than for the use of certificates described in paragraph 1.4 of this CP.

1.2 References to this CP

Within the PKI for the government different structures or roots are used based both on the SHA-1 algorithm (G1) and the SHA-256 algorithm (G2 and G3). Furthermore these structures are divided into different domains. For the G1 root this division consists of the Government/Companies domains (these two domains have merged over time) and Citizen domain. The G2 root is divided into an Organization, a Citizen and an Autonomous Devices domain.

Under the G3 root there are domains for Organization Person, Organization Services, Citizen, and Autonomous Devices.

Each CP is uniquely identified by an OID, in accordance with the following schedule.

| Autonomous Devices Domain: | |
|-----------------------------------|---|
| OID | CP |
| 2.16.528.1.1003.1.2.6.1 | for the authenticity certificate for services within the Autonomous Devices domain, that contains the public key for identification and authentication. |
| 2.16.528.1.1003.1.2.6.2 | for the confidentiality certificate for services within the Autonomous Devicesdomain, that contains the public key for confidentiality. |

| | |
|-------------------------|--|
| 2.16.528.1.1003.1.2.6.3 | for the combination certificate for devices within the Autonomous Devices domain, that contains the public key for authenticity and confidentiality. |
|-------------------------|--|

The OID is structured as follows: {joint-iso-itu-t (2). country (16). the Netherlands (528). Dutch organization (1). Dutch government (1003). PKI for the government (1). CP (2). autonomous devices domain (6). authenticity (1)/ confidentiality (2)/ combination (3). version number}.

If requirements only apply to one or two types of certificates, this is expressly specified by stating the Object Identifier (OID) referencing the applicable CP or CPs.

1.3 User Community

Within the Autonomous Devices domain, the certificate holders are devices that, in their operational stage of life, independently safeguard the integrity and authenticity of (measurement) data for (a specific purpose within a core task of) a specific government agency. The relevant government agency publishes a framework of standards for the devices to be manufactured for the specified purpose and is therefore seen as the "party responsible for establishing the framework".

Based on the framework of standards, the party responsible for establishing the framework issues a conformity certificate to every manufacturer that, for every type of device that is to be produced by the manufacturer, conforms to the framework of standards (the party responsible for establishing the framework can appoint a regulator responsible for conducting conformity assessments and issuing conformity certificates). This enables (prospective) device manufacturers to market devices that conform to the framework of standards.

Before a device (that conforms with the framework of standards) is ready for operation, a certificate has to be assigned (linked) to that device from the Autonomous Devices domain. During the operational life of an autonomous device, the devices certificate can be replaced or revoked. The party responsible for establishing the framework has to authorize one or more organizations to perform these tasks. The aforementioned organization is considered in this CP to be a Subscriber.

A Subscriber can nominate one or more certificate managers for performing (on behalf of the Subscriber) one or more activities relating to certificates in the Autonomous Devices domain. There are two types of certificate managers:

- Natural personalities directly related to the Subscriber organization;
- Natural personalities related to one or more legal personalities who have an agreement with the Subscriber organization.

Taking into account the aforementioned, in the Autonomous Devices domain the user community consists of parties responsible for establishing frameworks, manufacturers, subscribers, certificate managers, certificate holders (the devices themselves) and relying parties (including the parties responsible for establishing the frameworks).

- A *Party responsible for establishing a framework* is a government agency that:

- for a specific core task has a need for (measurement) data that originates from outside its immediate sphere of influence;
- to safeguard the integrity and authenticity of that (measurement) data, wishes to use specific devices that operate autonomously;
- to safeguard the trustworthiness of specimens of that type of device:
 - draws up a framework of standards for the production, activation, operation, maintenance, collection and use and formulates this in legislation and regulations;
 - based on that framework of standards, authorizes organizations to:
 - produce and distribute devices of a particular type;
 - link certificates to particular devices;
 - replace certificates on particular devices;
 - revoke certificates of particular types of devices.
- A *Manufacturer* is an organization recognized in the Netherlands, that demonstrably conforms to the Framework of standards for producing, and distributing in the Netherlands of specific types of Autonomous Devices and is authorized to do so by the Party responsible for establishing the framework.
- A *subscriber* is a natural or legal personality who enters into an agreement with a CSP on behalf of one or more certificate holders for certification of the public keys. Within the framework of the Autonomous Devices domain, a Subscriber is an organization recognized in the Netherlands, who demonstrably conforms to the admission requirements for mapping certificates (from the Autonomous Devices domain) to specific types of Autonomous Devices.
- A *certificate holder* is an entity, characterized in a protected link with a certificate as the holder of the private key that is linked to the public key provided in the certificate.

A Certificate holder is a device of which the operation and the method of production demonstrably conform to the framework of standards of a specific type of autonomous device and that, in that capacity, is authorized by the party responsible for establishing the framework to use an Autonomous Devices certificate linked to that device.

The linkage between certificate and device is made and protected by an organizational entity for which a subscriber is the contracting party.

- A *Certificate manager* is a natural person or a combination of a natural person and a legal personality who perform activities on behalf of the Subscriber (linking, replacement and/or revocation) with regard to the certificate holder's certificate. The subscriber instructs the certificate manager to perform the relevant actions and records these in a proof of certificate management.
- A *relying party* is every natural or legal personality who is a recipient of a certificate and who acts with a trust in that certificate. Unlike with other CPs, relying parties derive security from both the interconnectedness between an autonomous device and its certificate, and with the approval shown by that certificate of the operation of the autonomous device. The CP Autonomous Devices therefore places an equal emphasis on offering security about the interconnectedness of a

message signed by an autonomous device with on the one hand the identity of the autonomous device and on the other hand its approved operation. Establishing the identity of the certificate holder (device) is, in light of this, as equally important as establishing the approval of its operation.

1.4 Certificate Usage

The use of certificates issued under this CP relates to communication from certificate holders who act in accordance with their certified operation.

[OID 2.16.528.1.1003.1.2.6.1] Authenticity certificates, which are issued under this CP, can be used for electronically reliably identifying and authenticating the Autonomous Device and its certified operation.

[OID 2.16.528.1.1003.1.2.6.2] Confidentiality certificates, issued under this CP, can be used to protect the confidentiality of data that is exchanged with the Autonomous Device and/or stored in that in its electronic form.

[OID 2.16.528.1.1003.1.2.6.3] Combination certificates that are issued under this CP can be used to safeguard a connection between a specific client and an Autonomous Device.

1.5 Contact Information Policy Authority

The PA is responsible for this CP. Questions relating to this CP can be put to the PA; the address can be found at: <http://www.logius.nl/pkioverheid>.

2 Publication and Repository Responsibilities

2.1 **Electronic Repository**

Contains no additional requirements.

2.2 **Publication of CSP Information**

Contains no additional requirements.

2.4 **Access to Published Information**

Contains no additional requirements.

3 Identification and Authentication

3.1 Naming

Contains no additional requirements.

3.2 Initial Identity Validation

| | |
|-----------------|---|
| RFC 3647 | 3.2.2 Authentication of organizational entity |
| Number | 3.2.2-pkio4 |

| | |
|-----------------|---|
| RFC 3647 | 3.2.2 Authentication of organizational entity |
| Number | 3.2.2-pkio144 |

| | |
|-----------------|---|
| RFC 3647 | 3.2.3 Authentication of individual identity |
| Number | 3.2.3-pkio22 |

| | |
|-----------------|---|
| RFC 3647 | 3.2.3 Authentication of individual identity |
| Number | 3.2.3-pkio24 |

| | |
|-----------------|---|
| RFC 3647 | 3.2.3 Authentication of individual identity |
| Number | 3.2.3-pkio26 |

| | |
|-----------------|-------------------------------|
| RFC 3647 | 3.2.5 Validation of authority |
| Number | 3.2.5-pkio31 |

| | |
|-----------------|-------------------------------|
| RFC 3647 | 3.2.5 Validation of authority |
| Number | 3.2.5-pkio34 |

3.3 Identification and Authentication for Re-key Requests

Contains no additional requirements.

4 Certificate Life-Cycle Operational Requirements

4.1 Certificate Application

Contains no additional requirements.

4.4 Certificate Acceptance

Contains no additional requirements.

4.5 Key Pair and Certificate Usage

Contains no additional requirements.

4.9 Revocation and Suspension of Certificates

| | |
|-----------------|------------------------------------|
| RFC 3647 | 4.9.1 Circumstances for revocation |
| Number | 4.9.1-pkio52 |

| | |
|-----------------|---|
| RFC 3647 | 4.9.3 Procedures for revocation request |
| Number | 4.9.3-pkio57 |

| | |
|-----------------|---|
| RFC 3647 | 4.9.3 Procedures for revocation request |
| Number | 4.9.3-pkio58 |

| | |
|-----------------|------------------------------|
| RFC 3647 | 4.9.7 CRL issuance frequency |
| Number | 4.9.7-pkio65 |

| | |
|-----------------|---|
| RFC 3647 | 4.9.9 On-line revocation/status checking availability |
| Number | 4.9.7-pkio66 |

4.10 Certificate Status Services

Contains no additional requirements.

5 Facility, Management and Operational Controls

5.2 Procedural Controls

Contains no additional requirements.

5.3 Personnel Controls

| | |
|-----------------|------------------------------------|
| RFC 3647 | 5.3.2 Background checks procedures |
| Number | 5.3.2-pkio79 |

5.4 Audit Loggin Procedures

| | |
|-----------------|--------------------------------|
| RFC 3647 | 5.4.1 Types of events recorded |
| Number | 5.4.1-pkio80 |

5.5 Records Archival

| | |
|-----------------|--------------------------------|
| RFC 3647 | 5.5.1 Types of events recorded |
| Number | 5.5.1-pkio82 |

5.7 Compromise and Disaster Recovery

| | |
|-----------------|--|
| RFC 3647 | 5.7.4 Business continuity capabilities after a disaster. |
| Number | 5.7.4-pkio86 |

6 Technical Security Controls

6.1 Key Pair Generation and Installation

| | |
|-----------------|--|
| RFC 3647 | 6.1.1 Key pair generation for the CSP sub CA |
| Number | 6.1.1-pki087 |

| | |
|-----------------|---|
| RFC 3647 | 6.1.1 Key pair generation for the certificate holders |
| Number | 6.1.1-pki088 |

| | |
|-----------------|---|
| RFC 3647 | 6.1.1 Key pair generation for the certificate holders |
| Number | 6.1.1-pki089 |

| | |
|-----------------|---|
| RFC 3647 | 6.1.1 Key pair generation for the certificate holders |
| Number | 6.1.1-pki093 |

| | |
|-----------------|--|
| RFC 3647 | 6.1.2 Private key and SUD delivery to the certificate holder |
| Number | 6.1.2-pki095 |

6.2 Private Key Protection and Cryptographic Module Engineering Controls

| | |
|-----------------|--|
| RFC 3647 | 6.2.3 Private key escrow of certificate holder key |
| Number | 6.2.3-pki099 |

| | |
|-----------------|--|
| RFC 3647 | 6.2.3 Private key escrow of certificate holder key |
| Number | 6.2.3-pki100 |

| | |
|-----------------|------------------------------------|
| RFC 3647 | 6.2.11 Cryptographic module rating |
| Number | 6.2.11-pki105 |

| | |
|-----------------|------------------------------------|
| RFC 3647 | 6.2.11 Cryptographic module rating |
| Number | 6.2.11-pkio125 |

6.3 Other Aspects of Key Pair Management

| | |
|-----------------|--|
| RFC 3647 | 6.3.2 Certificate operational periods and key pair usage periods |
| Number | 6.3.2-pkio111 |

6.4 Activation data

| | |
|-----------------|---|
| RFC 3647 | 6.4.1 Activation data generation and installation |
| Number | 6.4.1-pkio112 |

| | |
|-----------------|---|
| RFC 3647 | 6.4.1 Activation data generation and installation |
| Number | 6.4.1-pkio113 |

6.5 Computer Security Controls

Contains no additional requirements.

6.6 Life Cycle Technical Controls

Contains no additional requirements.

6.7 Network Security Controls

Contains no additional requirements.

7 Certificate, CRL and OSCP profiles

7.1 Certificate Profile

Contains no additional requirements.

7.2 CRL Profile

Contains no additional requirements.

7.3 OSCP Profile

| | |
|-----------------|------------------|
| RFC 3647 | 7.3 OSCP profile |
| Number | 7.3-pkio123 |

8 Compliance Audit and Other Assessments

All subjects relating to the conformity assessment of the CSPs within the PKI for the government are covered in PoR part 2: Admittance to and Supervision within the PKI for the government.

9 Other Business and Legal Matters

9.2 Financial Responsibility

| | |
|-----------------|--------------------------|
| RFC 3647 | 9.2.1 Insurance coverage |
| Number | 9.2.1-pkio124 |

9.5 Intellectual Property Rights

Contains no additional requirements.

9.6 Representations and Warranties

| | |
|-----------------|---|
| RFC 3647 | 9.6.1 CA Representations and Warranties by CSPs |
| Number | 9.6.1-pkio127 |

| | |
|-----------------|---|
| RFC 3647 | 9.6.1 CA Representations and Warranties by CSPs |
| Number | 9.6.1-pkio129 |

| | |
|-----------------|---|
| RFC 3647 | 9.6.1 CA Representations and Warranties by CSPs |
| Number | 9.6.1-pkio132 |

| | |
|-----------------|---|
| RFC 3647 | 9.6.1 CA Representations and Warranties by CSPs |
| Number | 9.6.1-pkio142 |

9.8 Limitations of Liability

| | |
|-----------------|------------------------------|
| RFC 3647 | 9.8 Limitations of liability |
| Number | 9.8-pkio143 |

9.12 Amendments

Contains no additional requirements.

9.13 Dispute Resolution Procedures

Contains no additional requirements.

9.14 Governing Law

Contains no additional requirements.

9.17 Other provisions

| | |
|-----------------|-----------------------|
| RFC 3647 | 9.17 Other provisions |
| Number | 9.17-pkio141 |

If by judicial decision one or more provisions of this CP are declared to be invalid or not applicable, this does not affect the validity and applicability of all other provisions.

Appendix A Certificate profile

Profile of device-linked certificates for the Autonomous Devices domain

Criteria

When defining the fields and attributes within a certificate, the following codes are used:

- V : Compulsory; indicates that the attribute is compulsory and MUST be used in the certificate.
- O : Optional; indicates that the attribute is optional and MAY be used in the certificate.
- A : Advised against; indicates that the attribute is advised against and SHOULD NOT be used in the certificate.
- N : Not allowed; indicates that the use of the attribute in the PKI for the government is not allowed.

For the extensions, fields/attributes are used that, in accordance with international standards, are critical, are marked in the 'Critical' column with 'yes' to show that the relevant attribute MUST be checked using a process by means of which a certificate is evaluated. Other fields/attributes are shown with 'no'.

Device-linked certificates

Basic Attributes

| Field / Attribute | Criteria | Description | Standard reference | Type | Explanation |
|----------------------------|----------|--|-------------------------------|------------------|---|
| Version | V | MUST be set at 2 (X.509v3). | RFC 5280 | Integer | Describes the version of the certificate, the value 2 stands for X.509 version 3. |
| SerialNumber | V | A serial number that MUST uniquely identify the certificate within the publishing CA domain. | RFC 5280 | Integer | All end user certificates have to contain at least 8 bytes of unpredictable random data in the certificate's serial number (SerialNumber). |
| Signature | V | MUST be created on the algorithm, as stipulated by the PA. | RFC 5280, ETSI TS 102176 | OID | MUST be the same as the field signatureAlgorithm. For certificates under the G2 root certificate, only sha-256WithRSAEncryption is allowed. |
| Issuer | V | MUST contain a Distinguished Name (DN). The field has the attributes listed below: | PKIo, RFC3739, ETSI TS 102280 | | Attributes other than those mentioned below MUST NOT be used. The attributes that are used MUST be the same as the corresponding attributes in the Subject field of the CSP certificate (for validation). |
| Issuer.countryName | V | MUST contain the country code of the country where the issuing organization of the certificate is located. | ETSI TS101862, X520, ISO 3166 | Printable String | C = NL for CSPs located in the Netherlands. |
| Issuer.stateOrProvinceName | N | Use is not allowed. | PKIo | UTF8String | - |

| Field / Attribute | Criteria | Description | Standard reference | Type | Explanation |
|--------------------------------|----------|--|--------------------------|------------------|---|
| Issuer.OrganizationName | V | Full name in accordance with the accepted document or basic registry | ETSI TS 102280 | UTF8String | |
| Issuer. organizationalUnitName | O | Optional specification of an organizational entity. This field MUST NOT include a function indication or similar. It may include, if applicable, the types of certificates that are supported. | ETSI TS 102280 | UTF8String | Several instances of this attribute MAY be used. |
| Issuer.localityName | N | Use is not allowed. | PKIo | UTF8String | - |
| Issuer.serialNumber | O | MUST be used in accordance with RFC 3739 IF required for unambiguous naming | RFC 3739 | Printable String | |
| Issuer.commonName | V | MUST include the name of the CA in accordance with the accepted document or basic registry, MAY include the Domain label and/or the types of certificates that are supported | PKIo, RFC 5280, RFC 3739 | UTF8String | The commonName attribute MUST NOT be necessary to identify the issuing government body (no part of the Distinguished Name, requirement from RFC 3739) |
| Validity | V | MUST define the period of validity (validity) of the certificate. | RFC 5280 | UTCTime | MUST include the start and end date for validity of the certificate in accordance with the applicable policy laid down in the CPS. |
| subject | V | The attributes that are used to describe the | PKIo, RFC3739, | | MUST contain a Distinguished Name (DN). Attributes other than those |

| Field / Attribute | Criteria | Description | Standard reference | Type | Explanation |
|---------------------|----------|---|---------------------------------|-----------------|--|
| | | subject (device) MUST mention the subject in a unique way and include information about the subscriber organization. The field has the following attributes: | ETSI TS 102 280 | | mentioned below MUST NOT be used. |
| Subject.countryName | V | Fixed value: C=NL, conform ISO 3166. | RFC 3739, X520, ISO 3166, PKIo | PrintableString | Country name specifies that the certificate is issued within the <i>context</i> of the (Dutch) PKI for the government. |
| Subject.commonName | V | MUST identify the framework of standards that the device conforms to OR MUST identify the framework of standards in accordance with the model/type of the device. | RFC 3739, ETSI TS 102 280, PKIo | UTF8String | The subscriber MUST prove that the organization can assign this name. Wildcards cannot be used in this attribute. Examples of a correct entry are: The type approval number of the relevant device; The (short) description of the specific type of Autonomous Devices |
| Subject.Surname | N | Is not used for autonomous devices certificates. | PKIo | | Devices certificates are not personal. The use of this attribute is therefore not allowed, to avoid confusion. |
| Subject.givenName | N | Is not used for autonomous devices certificates. | PKIo | | Devices certificates are not personal. The use of this attribute is therefore not allowed, to avoid confusion. |
| Subject.pseudonym | N | Pseudonyms may not be used. | ETSI TS 102 280, RFC 3739, PKIo | | |

| Field / Attribute | Criteria | Description | Standard reference | Type | Explanation |
|--------------------------------|----------|--|--------------------|------------|--|
| Subject.organizationName | V | The full name of the subscriber's organization in accordance with the accepted document or Basic Registry. | PKIo | UTF8String | The subscriber organization is the organization with which the CSP has entered into an agreement for the linkage/award of certificates to devices within the framework of standards drawn up by the party responsible for establishing the framework. |
| Subject.organizationalUnitName | O | Optional naming of part of an organization within the subscriber organization. MUST correspond with the name of a part of an organization documented by the subscriber organisation. | PKIo | | This attribute MAY appear several times. The documentation that can be requested from the subscriber organization MUST show that the name used in this attribute mentions that part of the organization in which the certificate manager(s) of the subscriber organization work(s). |
| Subject.stateOrProvinceName | A | The use is advised against. If present, this field MUST contain the province in which the subscriber is established in accordance with an accepted document or Basic registry. | PKIo, RFC 3739 | UTF8String | Name of the province MUST correspond with the address of the subscriber in accordance with the accepted document or registry. |
| Subject.localityName | A | The use is advised against. If present, this field MUST contain the location of the subscriber in accordance with an accepted document or Basic registry. | PKIo, RFC 3739 | UTF8String | Name of the location MUST correspond with the address of the subscriber in accordance with the accepted document or registry. |
| Subject.postalAddress | A | The use is advised against. If present, this field | PKIo, RFC 3739 | UTF8String | The address MUST correspond with the address of the subscriber in |

| Field / Attribute | Criteria | Description | Standard reference | Type | Explanation |
|-------------------------|----------|---|-------------------------------------|------------------|--|
| | | MUST contain the postal address of the subscriber in accordance with an accepted document or Basic registry. | | | accordance with the accepted document or registry. |
| Subject.emailAddress | N | Use is not allowed. | RFC 5280 | IA5String | This field MUST NOT be used in new certificates. |
| Subject.serialNumber | O | The CSP is responsible for safeguarding the uniqueness of the subject (device). The Subject.serialNumber MUST be used to identify the subject uniquely. | RFC 3739, X 520, PKIo | Printable String | The number is determined by the CSP and/or the government. The number can differ for each domain and can be used for several applications. In addition to the definition in RFC 3739, the number MAY be added to, in order to identify as well as the subject, for example, the SUD. |
| Subject.title | O | Shows the applicable authorization of the (autonomous) device within the framework of standards. | ETSI TS 102 280, RFC 3739, RFC 5280 | | The party responsible for establishing the framework determines whether this attribute is used and establishes that usage in a framework of standards drawn up by this party. |
| subjectPublicKeyInfo | V | Contains, among other things, the public key. | ETSI TS 102 280, RFC 3279 | | Contains the public key, identifies the algorithm with which the key can be used. |
| IssuerUniqueIdentifier | N | Is not used. | RFC 5280 | | The use of this is not allowed (RFC 5280) |
| subjectUniqueIdentifier | N | Is not used. | RFC 5280 | | The use of this is not allowed (RFC 5280) |

Standard extensions

| Field / Attribute | Criteria | Critical? | Description | Standard reference | Type | Explanation |
|------------------------|----------|-----------|--|-------------------------------------|-----------|---|
| authorityKeyIdentifier | V | No | The algorithm to generate the AuthorityKey MUST be created on an algorithm determined by the PA. | ETSI TS 102 280, RFC 5280 | BitString | The value MUST contain the SHA-1 hash from the authorityKey (public key of the CSP/CA). |
| SubjectKeyIdentifier | V | No | The algorithm to generate the subjectKey MUST be created on an algorithm determined by the PA. | RFC 5280 | BitString | The value MUST contain the SHA-1 hash from the subjectKey (public key of the certificate holder). |
| KeyUsage | V | Yes | <p>The attribute extension specifies the intended purpose of the key incorporated in the certificate. In the PKI for the government, for each certificate type various bits are incorporated in the keyUsage extension.</p> <p>The digitalSignature bit MUST be included in authenticity certificates. Another keyUsage MAY NOT be combined with this.</p> <p>In confidentiality certificates, the keyEncipherment and dataEncipherment bits</p> | RFC 3739, RFC 5280, ETSI TS 102 280 | BitString | |

| | | | | | | |
|-----------------------|---|----|--|-----------|---------------------|---|
| | | | <p>MUST be included. Optionally, this MAY be combined with the keyAgreement bit. Another keyUsage MAY NOT be combined with this.</p> <p>In combination certificates the digitalSignature, keyEncipherment and keyAgreement bits MUST be incorporated and marked as critical. Another keyUsage MAY NOT be combined with this.</p> | | | |
| privateKeyUsagePeriod | N | | Is not used. | RFC 5280 | | |
| CertificatePolicies | V | No | MUST contain the OID of the certificate policy (CP), the URI of the certification practice statement (CPS), and a user notice. The applicable PKI for the government OID scheme is described in the CP. | RFC 3739 | OID, String, String | <p>For devices certificates in the Autonomous Devices domain, the OIDs are: 2.16.528.1.1003.1.2.6.1, 2.16.528.1.1003.1.2.6.2 and 2.16.528.1.1003.1.2.6.3.</p> <p>A further restriction, if any, with regard to the use of the certificate MUST be included in the CPS which this extension references and are preferably also shown in the user note included for this extension.</p> <p>Reference to the paragraph numbers of the PoR/CP in the user note is advised against because the persistency of this cannot be guaranteed (unlike the OID number of the CP).</p> |
| PolicyMappings | N | | Is not used. | | | This extension is not used in end user certificates |
| SubjectAltName | V | No | Contains one or more alternative | RFC 5280, | | Attributes other than those mentioned below MUST NOT be used. |

| | | | | | |
|----------------------------|---|--|--------------------|--|--|
| | | names/identification numbers of the certificate holder | PKIo, ETSI 102 280 | | |
| SubjectAltName.otherName | V | <p>MUST be used, containing a number that identifies the certificate holder (subject) globally.</p> <p>In addition, in the authenticity certificate, as othername a PrincipalName (UPN) MAY be included for use with SSO (Single Sign On).</p> | RFC 4043, PKIo | IA5String, Microsoft UPN, IBM Principal-Name or Permanent-Identifier | <p>Contains an OID assigned by PKIoverheid to the CSP (issuer) and a unique number within the namespace of that OID that will permanently identify the certificate holder (subject), in one of the following ways:</p> <ol style="list-style-type: none"> 1. MS UPN: [number]@[OID] 2. IA5String: [OID].[number] 3. IA5String: [OID]-[number] 4. Permanent Identifier: Identifiervalue = [number] Assigner = [OID] <p>Alternative 1. is also suitable for SSO (Single Sign On). If a second othername for SSO is given in the certificate, the SSO othername MUST be given first in the SubjectAltName, before the PKIoverheid format othername described above, in order to ensure the proper operation of the SSO mechanism.</p> |
| SubjectAltName.rfc822Name | A | MAY be used for the service's e-mail address, for applications that need the e-mail address in order to be able to function properly. | RFC 5280 | IA5String | For PKIoverheid certificates, the use of e-mail addresses is advised against, because e-mail addresses of certificate holders often change and are susceptible to spam. |
| IssuerAltName | N | Is not used. | RFC 5280 | | The DNS name, IP address and URI could potentially be entered into this field. The use of a rfc822 name (e-mail address) is NOT allowed. |
| subjectDirectoryAttributes | N | Is not used. | RFC 5280; RFC | | This extension may not be used. |

| | | | | | | |
|-----------------------|---|----------|---|---------------------------|----------------|---|
| | | | | 3739 | | |
| BasicConstraints | O | Yes | The "CA" field MUST be set at "FALSE", or be omitted (default value is then "FALSE"). | RFC 5280 | | A (Dutch language) browser can then be seen: Subjecttype = Eidentiteit", "Beperking voor padlengte = Geen ("Subjecttype = End Entity", "Path length constraint = None") |
| NameConstraints | N | | Is not used. | RFC 5280 | | Is not used in end user certificates. |
| PolicyConstraints | N | | Is not used. | RFC 5280 | | Is not used in end user certificates. |
| CRLDistributionPoints | V | No | MUST include the URI of a CRL distribution point. | RFC 5280, ETSI TS 102 280 | | The reference MUST be accessible through the http or LDAP protocol. The attribute Reason MUST NOT be used, reference MUST be made to 1 CRL for all types of reasons for revocation. In addition to CRL, other types of certificate status information service MAY be supported. |
| ExtKeyUsage | O | Yes / No | If only used if needed for the specific application. | RFC 5280 | KeyPurposeId's | Devices certificates MAY use ExtendedKeyUsage if this is required by the application for which the certificate is used. If used, the following conditions all apply. An ExtKeyUsage: <ul style="list-style-type: none"> • MAY be incorporated in every other certificate; • MUST NOT be listed as critical; • MUST include at least one (1) KeyPurposeId. Each KeyPurpose Id incorporated in an ExtKeyUsage: <ul style="list-style-type: none"> • MUST NOT conflict with the KeyUsage extension; • MUST be appropriate for the type of certificate holder; • MUST be defined in an internationally recognized standard, such as an RFC. Comment For correct operation of the application, authenticity certificates |

| | | | | | | |
|------------------|---|----|---|----------------|--|---|
| | | | | | | that are used for SSO (Single Sign On) MUST be provided with the KeyPurposeId for Smart Card Logon (1.3.6.1.4.1.311.20.2.2). |
| InhibitAnyPolicy | N | | Is not used. | RFC 5280 | | Is not used in end user certificates. |
| FreshestCRL | O | No | MUST contain the URI of a Delta CRL distribution point, if Delta CRLs are used. | RFC 5280, PKIo | | Delta-CRLs are an optional extension. In order to fulfil the requirements of PKIoverheid a CSP MUST also publish full CRLs at the required release frequency. |

Private extensions

| Field / Attribute | Criteria | Critical? | Description | Standard reference | Type | Explanation |
|---|----------|-----------|--|--|---------------------|---|
| authorityInfoAccess accessMethod (id-ad-caIssuers) | O | | An AccessDescription item with accessMethod id-ad-caIssuers references the online location where the certificate of the CSP CA that signed the current certificate (issue) is located. | RFC 5280 | URI | This attribute MUST include the URI of the relevant certificate file/object. If this is an HTTP-URI, the file that is referenced: is preferably a DER-coded CA certificate file, that is seen by the relevant HTTP server as the type MIME "application/pkix-cert". |
| SubjectInfoAccess | O | No | | RFC 5280 | OID, Generalname | This field can be used to reference additional information about the subject. |
| BiometricInfo | N | | Is not used in autonomous devices certificates. | PKIo | | Biometric information is not advisable in non-personal certificates, such as devices certificates. |
| QcStatement | N | No | Is not used in autonomous devices certificates. | RFC 3739, ETSI TS 102 280, ETSI TS 101 862 | OID | This attribute is only used in personal certificates and not allowed in devices certificates. |

10 Revisions

10.1 Amendments from version 4.0 to 4.1

10.1.1 *New*

- Certification against ETSI TS 102 042 (effective date no later than 4 weeks after publication of PoR 4.1);

10.1.2 *Modifications*

Not applicable.

10.1.3 *Editorial*

- Small editorial modification to the following requirement:
 - Requirement 5.7.4-pkio86

10.2 Amendments from version 3.7 to 4.0

10.2.1 *New*

- Requirement 4.9.9-pkio69

10.2.2 *Modifications*

- PoR requirements have been renumbered according to a new naming convention;
- The creation of a document containing the baseline and additional requirements;
- Changes to requirements can be found in the baseline and additional requirements documents respectively.

10.2.3 *Editorial*

Editorial changes to requirements can be found in the baseline and additional requirements documents respectively. These changes have no effect on the content of the information.
